

Philippe Gaultier

I am a French-German Senior Software Engineer focusing on delivering *simple*, high quality software that's easy to understand, deploy, and troubleshoot.

Experience

Senior Software Engineer *Ory, Munich, Germany; 2025-present*

I work on a suite of Go software powering authentication, authorization, complex permission models, at scale. Most of my work is open-source and I support a variety of users: open source community, big organizations like banks that self-host across 4 different databases, or use our multi-tenant, multi-region SaaS solution. I respond to community contributions, reports from security researchers, customer requests, etc. My main focusses are security (introduction of Land-lock, memory limits for user scripts, discovery and fix of cross-requests data leaks), correctness (numerous data races fixes) and new features (device binding), with some optimizations sprinkled in.

Senior Software Engineer *Giesecke+Devrient, Munich, Germany; 2023-2025*

I worked on one of the most promising Central Bank Digital Currency (CBDC) already used by several countries with real users and banks, with *Rust*, *C++*, *Go*, *Docker* and *Kubernetes*, with the highest levels of availability, correctness, security, and regulatory constraints.

There, I initiated and led the effort to rewrite an insecure and crucial C++ codebase in Rust running on 10+ platforms including mobile platforms, as well as mentoring teammates to learn Rust & C++.

Back-end Software Engineer & DevOps *PPRO, Munich, Germany; 2017-2023*

I wrote and deployed end-to-end Fintech web services that serve millions of customers worldwide with billions of euros in transaction volume, in a variety of tech stacks (*Go*, *C++*, *Kotlin*, *Docker*, *Kubernetes*, *Terraform*), with high availability and regulatory constraints. I also helped moving multiple services from the data center to the cloud without disruption or customers even noticing. I also have taken on DevOps & SRE responsibilities such as adding logging, metrics, alerting, distributed tracing and performance monitoring to existing software in order to increase their reliability, as well as guaranteeing SLAs crucial to the business. I did on-call for business critical services, and I conducted numerous technical interviews.

Full-stack Software Engineer *EdgeLab, Lausanne, Switzerland; 2015-2017*

I joined a Fintech startup and helped the product (risk analytics & investment decision making application) go to the next level by introducing internationalization, OAuth, Continuous Integration, and upgrading to the latest language standards (*ECMAScript 6, C++14*), and worked among other things on the quantitative prediction algorithms in *C++*. The startup was later acquired by a major Swiss bank for a 8 digit number.

CNRS Intern Software Engineer experimenting with the Oculus Rift (VR) *CNRS, Strasbourg, France; 2014*

3D Oculus Rift (virtual reality) visualization software of astronomical data for pedagogical and research purposes in *C, C++* and *OpenGL 3.3*.

Intern Software Engineer *Crédit Mutuel (Bank), Strasbourg, France; 2013*

I migrated a *COBOL* mainframe accounting application to a *C#* web application with some new parts in *COBOL* for one of the biggest banks in the country.

Technical experience

2025-Present: **SQLite, CockroachDB** Several big production applications.

2013-Present

AWS, Docker, Git 20+ production applications delivered.

2018-Present

Kafka, Kubernetes, MySQL, PostgreSQL, MariaDB 10+ production applications delivered.

2018-Present

Go 10+ performant production applications in Go delivered.

2011-Present

C, C++, CMake: Delivered 10+ low level side projects and big, long-lived production applications in a wide range of OSes and platforms including mobile platforms.

2023-Present

Rust: I initiated and led the effort to rewrite an insecure and crucial C++ codebase in Rust running on 10+ platforms including mobile platforms as well as mentoring teammates to learn Rust & C++.

Solid knowledge of **x64 assembly, Terraform, Python, JVM, Dtrace**. I worked on small and big production applications with those languages, but I don't see myself working full-time with those.

Education

2018-Present

Several trainings and workshops by AWS

2012-2015

Masters in Computer Science & Engineering Degree *ENSIE, Strasbourg, France*

2010-2012

Higher School Preparatory Classes *Lycée Kléber, Strasbourg, France*

2007-2012

Abibac (dual French & German Highschool Diploma) *Belfort, France*

Hobbies

- Languages: French (native), English (fluent, TOEIC 990/990), German (fluent, C2 diplom), Bavarian (intermediate), Japanese (beginner)
- Weightlifting
- Philology (Language learning)
- Cinema
- Gardening
- Contributing to open-source projects
- Beekeeping
- Playing music
